TECHNICAL SKILLS

Senior Full Stack Engineer & AI/ML Specialist with 10+ years of experience designing scalable web applications, microservices architectures, and data-driven solutions. Proven ability to improve system performance, reduce operational costs, and deliver high-impact products for international clients. Core expertise in Java (Spring Boot, Quarkus) and modern frontend frameworks (Angular, React), complemented by strong backend development with Node.js and data science with Python (TensorFlow, PyTorch, Scikit-Learn). Experienced in building Agentic AI systems using LangChain, with a solid background in cloud platforms (AWS, Azure), DevOps practices, and CI/CD pipelines.

PERSONAL SKILLS

Passionate about continuous learning and innovation, with a track record of self-teaching emerging technologies (Agentic AI, LLMs, cloud-native architectures). Comfortable leading technical teams and driving AI initiatives across multidisciplinary environments.

WORK EXPERIENCE

Manoa Tech
AI System Architect:

FUNCTIONS:

TranslateMe2Text — Real-Time Translation Platform

- Designed end-to-end technical architecture for a real-time audio transcription and translation system achieving **~400ms latency** and **90% voice recognition accuracy**, supporting **2+ simultaneous languages** with zero app installation required.
- Selected and integrated core technologies (React, Node.js, Python, Redis, DeepGram, DeepL) optimizing for performance and scalability.
- Deployed production-ready microservices architecture using Docker and Kubernetes, enabling a live SaaS product with tiered pricing (€9–€129/month) serving churches, conferences, and multilingual events.

Clinical Beauty — Agentic AI Assistant:

- Built a multi-agent AI workflow using N8N and MCP protocol, integrating Google Calendar and Gmail to fully automate client scheduling and appointment reminders.
- Implemented RAG (Retrieval-Augmented Generation) to enable intelligent retrieval of clinical services information.
- **Reduced manual client communication by 6 hours per week**, freeing staff to focus on higher-value tasks.
- Managed server provisioning, Docker configuration, DNS setup, and production deployment end-to-end.

START: January 2025 – Current

Growin
Senior Full stack Developer

Siemens project:

FUNCTIONS:

- Reduced application vulnerabilities from **300 to 26** by implementing automated OWASP security scans integrated directly into the CI/CD pipeline using Jenkins and Groovy.
- Built and maintained RESTful services using **Java 17 + Spring Boot**, following clean code practices and design patterns.
- Developed and improved frontend features using **Angular 20**, integrating UI components with backend services.
- Led sprint planning and task management under **Scrum methodology** using Jira, keeping the team aligned on project state and priorities.
- Collaborated directly with client (Siemens) to understand requirements and propose technical solutions.

START: March 2024 – Current

CI&T
Senior Full stack Developer

Princeton project:

Working for Norfolk Southern Railway a United States Class I railroad company, developing from the scratch an internal logistic web application to manage train operations, routes, station and terminal.

FUNCTIONS:

- Built from scratch an internal logistics web application for **Norfolk Southern Railway** (US Class I railroad company) to manage train operations, routes, stations, and terminals.
- Maintained **85%+ test coverage** on both frontend and backend, ensuring system reliability and reducing production bugs.
- Enforced **sub-3-second response time** standards across all API endpoints, ensuring a smooth operational experience for railway staff.
- Integrated **15 legacy SOAP services** into a modern REST architecture, bridging critical operational systems.
- Implemented **micro-frontend architecture** using Angular 14 and Material UI, adapting BI prototypes into production-ready components.
- Built RESTful microservices using **Java 17 + Spring Boot, Quarkus**, following clean code practices and design patterns.
- Led sprint reviews presenting progress and new features directly to the client under Scrum methodology.

START: November 2022 – November 2023

Globant

Web UI Developer

FUNTIONS:

- Developed React.js features for two client projects in the food and plant retail industries, delivering responsive and scalable user interfaces.
- Implemented **Redux** for state management across complex frontend flows, ensuring predictable and maintainable application behavior.
- Built fully **responsive designs** using Material UI and Bootstrap, ensuring optimal experience across devices.
- Integrated **Next.js, React Hooks, and Redux** following best practices and appropriate design patterns.
- Participated in full **Scrum ceremonies** including sprint planning, reviews, and retrospectives with clients and team.

START: February 2022– August 2022

Software One

Senior Software Developer

CVU (Círculo de Viajes Universal) — Travel Agency Portal

- Designed and developed a full web portal enabling clients to make **recurring online payments** and save for vacations, replacing a manual door-to-door monthly cash collection process — directly digitizing a core business operation.
- Implemented **PSE payment gateway integration**, enabling secure online transactions at scale.
- Designed REST API with **OAuth2 authentication**, documented with Swagger, and built responsive UI in close collaboration with UX designers.
- Built on **Liferay 7.1 + Angular 6**, implementing MVC portlets, Service Builder, FreeMarker, layouts, themes, and custom SCSS styles.
- Managed deployments and environments using **DevOps pipelines** under Scrum methodology.

XM — Energy Market Platform

- Developed micro-frontend Angular components under the highest coding standards, maintaining **80%+ test coverage** using Karma and Jasmine.
- Consumed and tested .NET REST APIs using Postman and Swagger, building TypeScript logic for the presentation layer.
- Ensured continuous code quality through **SonarQube** static analysis integrated into Azure DevOps pipelines.
- Managed CI/CD pipelines on **Azure DevOps** for deployments across multiple environments.

Postobón — Internal Logistics Platform

- Led frontend architecture definition for a logistics platform for one of Colombia's largest beverage companies, using **Angular 11** with reactive forms, Material UI, and reusable components.
- Maintained **80%+ test coverage** across all developed features using Karma and Jasmine.
- Participated in full **Scrum ceremonies** including sprint planning, reviews, and retrospectives with client and team.

EPM — Energy & Public Services Platform

- Established initial frontend architecture and led development of the most complex requirements for EPM's platform.
- **Trained 15 developers** on Angular best practices and unit testing methodologies.
- Authored **official company documentation** for unit testing in Angular using Karma and Jasmine, covering the most common real-world scenarios in web applications.
- Managed backlog, development tasks, and bug tracking using **Azure DevOps**, with CI/CD pipelines for continuous integration and multi-environment deployments.

START: October 2018 – February 2022

Cifin/TransUnion

Developer Engineer

FUNCTIONS:

- Developed SOAP web services and web systems in **Java, PL/SQL**, and Oracle handling commercial and legal credit information for **10+ banking and financial entities**.
- Worked on one of **Colombia's largest credit risk databases**, managing millions of records of national credit information across **distributed and partitioned Oracle schemas.**
- Optimized a critical **batch processing request from 19 hours to 8 minutes**, drastically reducing operational processing time for banking clients.
- Improved **Oracle DB query performance from 3 seconds to 0.8 seconds** using PL/SQL execution plans and query optimization techniques.
- Deployed solutions on **Oracle WebLogic Server**, working closely with QA teams for testing and validation.
- Created comprehensive technical and end-user documentation including UML diagrams, tutorials, and deployment guides for every developed feature.
- Managed code versioning using **TortoiseSVN**.

START: July 2017 – October 2018

ColsinS.A.S Developer

Junior Developer

FUNCTIONS:

- Developed an internal claims and complaints management system for **Colsanitas**, integrating business process flows through **Bonita BPMN** to track and manage client requests end-to-end.
- Built backend using **Java EE (EJB, JPA, Hibernate)** with **PostgreSQL** in production and MySQL in development environments, deployed on **JBoss Server**.
- Integrated with **Liferay, Alfresco, and Bonita BPMN** APIs to connect forms with automated business process workflows.
- Implemented application **internationalization** and maintained code quality standards using **SonarQube** and **Jira** for bug tracking.
- Managed code versioning using **TortoiseSVN** and **Maven** for build management.

START: November 2016 – October 2017

ACADEMIC TRAINING

University Studies: UNIVERSITAT POLITÉCNICA DE CATALUNYA

Master in Artificial Intelligence

2023 - 2025

University Studies: UNIVERSIDAD DISTRITAL FRANCISCO JOSE DE CALDAS

Telematics Engineer

University Studies: UNIVERSIDAD DISTRITAL FRANCISCO JOSE DE CALDAS

Technologist in Data Systematization
